An ideal ATV tipping and forestry trailer that can be used for all jobs around the farm

- Removable insert floor with 2 mm galvanised plating
- Powerful V-bogie for good climbing capability in forest terrain
- Powerful mechanical Tower2+ slewing house lock
- 4 reinforced and serrated flip-up and folding bolsters
- 2 adjustable side stabilisers for use during loading included
- Crane tower attachment can be adjusted
- Brake hand winch included

Removable insert floor

The trailer has a removable insert floor with 2 mm galvanised plating. You can transport loose material with the floor fitted, and without the floor you can transport timber.

Powerful V-bogie, removable sides and headboard to accommodate different lengths of timber
Eyelet in front edge of floor for tipping with winch and high tipping angle

When you want to convert the tipping trailer from transporting loose materials into a forestry trailer and transport timber without the floor, just remove two pins and remove the floor. 4 reinforced and serrated flip-up and folding bolsters allow you to minimise the lifting height when loading timber.

Tyres with all-terrain tread pattern for good grip and load-bearing capacity in the forest. The tyres have a dimension of 22x11-10 and are easily inflated via the tyre valves. Powerful mechanical slewing house lock with seven positions for winching heavy loads in different directions. The Tower2+ can also be rotated 360°.

2 adjustable side stabilisers for loading are included, along with one parking jack for the tow bar, adjustable using the crank. These ensure that the trailer remains stable when hitching and unhitching it to/from a towing vehicle and during loading and unloading. The stabilisers fitted to the trailer's headboard can be raised, lowered and extended laterally.

The boom length is adjustable from 160 to 220 cm

The entire trailer is made of galvanised plating, which makes it significantly more durable and gives it a longer service life.

Supplied with yellow brake hand winch Rotatable tow bar ball hitch for 50 mm ball coupling

The trailer has a number of accessories to make your work in the forest easier. See accessories tab.

Some environmental images are shown without a winch and with previous model of the slewing house.

On some videos, the trailer may be equipped with an additional bolster kit.

TECHNICAL DATA

Wheels	22 x 11-10
Ground clearance	300 mm
Max. load	700 kg
Gear ratio	Crank 4:01
Vinch:	Break handwinch with lock
Weight	350 kg
